

RYOP Action Plan & Blog Audit — 2026-05-25

Based on: GSC Coverage export (May 25, 2026) + Theme v4 export + GSC 6-month + Ahrefs daily data
Supersedes: All previous reports on this topic.

New Finding: Google Is Actively De-Indexing the Site

This is the most urgent data point from today's upload.

Indexed Pages — 3-Month Collapse

Date	Indexed	Not Indexed	Daily Impressions
Feb 24, 2026	1,014	2,847	43,960
Mar 18, 2026	1,029	2,806	40,756 (temporary peak)
Apr 21, 2026	955	2,423	30,484 ← cliff
May 5, 2026	876	2,350	27,217 ← second cliff
May 12, 2026	839	2,307	21,788
May 18, 2026	850	2,283	20,027

Net loss in 3 months: - 164 indexed pages (-16%) — Google actively removed them - **-728 total pages from Google's known universe** — Googlebot stopped even discovering them - **-54% daily impressions** — from 43,960 to 20,027

What the "Critical Issues" Tell You

Issue	Pages	What it means
Crawled — currently not indexed	1,782	Google visited, judged as low quality, refused to index
Not found (404)	256	Broken URLs — wasted crawl budget
Alternate page w/ canonical	79	Duplicates handled (mostly correct)
Excluded by noindex tag	70	Tag/filter pages — correct
Page with redirect	42	Some redirect chains
Duplicate without canonical	30	Needs fixing
Blocked by robots.txt	17	Verify these should be blocked

The 1,782 "Crawled – currently not indexed" is the crisis. That is Google's quality verdict on the blog: *"I can reach these pages, but they are not worth ranking."* This is 63% of all non-indexed pages. As long as this number stays above ~200, the commercial pages cannot rank at their ceiling.

The Two Cliff Dates

- **April 21:** Indexed dropped 26 in a single day, impressions fell 31% overnight. This aligns with **Google's April 2026 algorithm activity** (rolling core signals).

- **May 5:** Another -36 indexed pages, impressions -12%. Continued de-indexation of low-quality blog content.

Theme v4 Status — What You Fixed

✓ | `within: collection` URL bug — FIXED

The highest-priority technical fix is now confirmed resolved in v4. All 8 instances across 5 files have been corrected. Product URLs from collection pages now point to the canonical `/products/y` path instead of `/collections/x/products/y`. This stops the equity splitting. Google will consolidate ranking signals to product pages over the next 4–8 weeks as it recrawls.

✓ Author metaobject system — Upgraded in v4

The `metaobject-author.liquid` section now includes a proper Shopify rich-text renderer for the `author_page` field (replaces the unreliable `metafield_tag` filter). The JavaScript renderer correctly handles paragraphs, headings, lists, bold, italic, and links. The Person JSON-LD schema is intact and correct.

Priority Action List — Ranked by Impact

🔴 URGENT (Do this week)

- 1. Stop publishing new consumer/DIY/alternatives blog posts immediately.** Every new post dilutes topical authority further. Google is already removing 5–10 pages per week. Stop adding fuel.
- 2. Fix the 256 broken 404 pages.** Export the "Not found (404)" list from GSC Coverage → Pages. For each: - If a better page exists: 301 redirect to it - If the topic is dead: submit for removal in GSC (URL Removal tool) 256 broken URLs waste crawl budget that should go to commercial pages.
- 3. Fix the 30 "Duplicate without canonical" pages.** These tell Google you have duplicate content with no authority signal. Add `<link rel="canonical">` to the preferred version. Likely caused by URL parameters (sort, filter variants without proper noindex/canonical).
- 4. Upload v4 theme to Shopify and publish it.** The `| within: collection` fix needs to go live so Google can recrawl corrected URLs.
- 5. Create Author metaobject entries in Shopify Admin.** Go to Admin → Content → Metaobjects → Author → Add entry. Without real entries, all 684 blog posts still show anonymous authorship to Google. This is the single most impactful E-E-A-T action available.

🟡 HIGH PRIORITY (Weeks 1–3)

- 6. Rebuild `/collections/custom-rolling-papers` into a real ranking page.** Currently at position 18.5 with 101 clicks despite 8,139 impressions. Add 600–800 words of genuine manufacturer content: materials (hemp/rice/unbleached), minimum order quantities, customization process, certifications (TÜV SÜD), turnaround times, who it's for (dispensaries, brands, events). This is the page that must climb to page 1.

7. Add internal links from high-traffic blog posts to commercial pages. Your blog sends 42,000 clicks/quarter to informational content with zero commercial routing. Add a contextual CTA block to every post with >500 clicks linking to `/collections/custom-rolling-papers` . Even 1% conversion rate = meaningful B2B leads.

8. Fix the homepage H1. Currently the `<h1>` wraps the logo. Add a single, keyword-bearing H1: *"Custom Rolling Papers & Pre-Roll Cones — Factory Direct, Low Minimums"*.

🟡 MEDIUM PRIORITY (Weeks 3–6)

9. Prune and consolidate weak blog content (see Blog Audit below).

10. Add `organization` JSON-LD with TÜV SÜD credential, founding year, `sameAs` (Trustpilot, Instagram, LinkedIn).

11. Add `BreadcrumbList` schema on collection and product pages.

12. Add `SearchAction` to `WebSite` schema for sitelinks search box eligibility.

13. Fix robots.txt/sitemap 403 so AI crawlers (OAI-SearchBot, PerplexityBot) and your own audit tools can access the site.

Blog Content Audit — Keep, Improve, or Remove

You have ~684 blog posts. 1,782 of your pages are "Crawled – not indexed." The path back is reducing low-quality page count, not adding more.

Decision framework: ask three questions about each post. 1. Could a potential wholesale customer or dispensary buyer land on this and become a lead? 2. Does it demonstrate expertise about rolling paper manufacturing? 3. Does it have >200 clicks in the last 6 months?

Any post answering No to all three should be removed or redirected.

✅ KEEP & IMPROVE — Commercial or Near-Commercial Content

These posts belong on a B2B rolling paper manufacturer site. Improve with: author attribution, deeper content (1,500+ words), internal links to collections, and genuine expert perspective.

Topic type	Action
"Custom rolling papers for brands / events / dispensaries"	Keep — expand to 1,500+ words, add case study or example
"Wholesale rolling papers" / MOQ guides	Keep — add specific pricing tiers, lead time
"How to brand rolling papers" / private label	Keep — this is a B2B buyer query
"Hemp / rice / unbleached rolling paper differences"	Keep — add manufacturer perspective
"Custom pre-rolled cones" / joint tubes	Keep — directly supports product pages
"Rolling paper certifications" / TÜV SÜD	Keep — E-E-A-T gold
Comparison posts: your products vs competitors	Keep — add schema markup

⚠️ KEEP & ADD CTA — High-Traffic Consumer Posts (Bridge Strategy)

These posts pull real traffic but from the wrong audience. You can't kill them without losing ~30,000 clicks/quarter. Instead: keep them live, but add a prominent CTA block and a genuine contextual link to the commercial collection.

Example CTA block to add to every post in this category:

Running low on papers? Roll Your Own Papers makes custom-branded rolling papers for dispensaries, brands, and events. [View custom options →](#)

Post (by topic)	Clicks (3 mo)	Why keep	What to add
"10 alternatives to rolling papers when you run out"	~10,544	#1 traffic driver — can't 301 it without losing 10k clicks	CTA block + internal links to hemp/ rice papers as better alternatives
"How to roll a joint" variations	~3,000–5,000 est.	High volume	CTA: "Roll with quality papers — see our selection"
"Best rolling papers" comparisons	~2,000+ est.	Commercial intent adjacent	Add RYOP products to comparison; link to shop
"How to roll a blunt"	High volume	Can bridge to cones/wraps	CTA to pre-rolled cones collection
"What is rolling paper made of"	Moderate	Material education	Manufacturer angle: link to your materials page

🗑️ REMOVE (301 Redirect or Delete) — Anti-Commercial Content

These actively harm the site's topical authority signal. Google reads them and concludes: "this is a lifestyle blog, not a manufacturer." Each one is a vote against your B2B positioning.

Redirect all of these to the most relevant remaining post or to the homepage. Do not leave them as 404s — always 301.

Topic	Why remove
"How to make rolling paper at home"	Teaches people not to buy your product
"How to make a joint without rolling paper"	Same — anti-purchase
"Can you use [parchment / toilet paper / gum wrappers / Bible pages]"	Alternatives to buying; zero commercial value
"How much does a bag of weed cost" / pricing posts	Completely unrelated to your product
"Can you fly with weed" / TSA cannabis posts	Completely unrelated — pure traffic dilution
"How to get high without weed" / drug substitutes	Reputational risk + zero relevance
"Weed slang / stoner culture" posts	Audience mismatch — no B2B buyer will ever convert
Near-duplicate "alternatives" posts (5+ on same topic)	Consolidate into one; 301 the rest
Near-duplicate "how to roll" posts (10+ on same topic)	Consolidate into one; 301 the rest

Topic	Why remove
Thin posts under 400 words with <50 clicks	No value; reclaim crawl budget

Estimated removal target: 200–300 posts (roughly 30–45% of blog).

CONSOLIDATE — Duplicate Clusters

You likely have multiple posts on the same topic. Merge these into single definitive posts, redirect duplicates.

Cluster	Estimated duplicates	Action
"Alternatives to rolling papers" variations	5–10 posts	Merge into one 2,000-word definitive guide; 301 the rest
"How to roll a joint" step-by-step variants	8–15 posts	One master post; 301 all others
"How to roll a blunt" variants	5–8 posts	One master post; 301 all others
"Best rolling papers [year]" annual versions	3–5 posts	Update the newest one; 301 older years
"Rolling paper brands" listicles	4–6 posts	Consolidate into one comparison

New Commercial Content to Create (After Pruning)

Once the 200–300 bad posts are removed, Google's topical read of the site shifts. Then these new posts will rank:

Target keyword	Post type	Target audience
"custom rolling papers for dispensaries"	Buyer guide	Dispensary purchasing managers
"branded rolling papers minimum order"	FAQ + guide	Brand/event organizers
"private label rolling papers manufacturer"	Landing page hybrid	B2B buyers
"custom pre-rolled cone packaging"	Product guide	Cannabis brands
"rolling paper supplier comparison"	Comparison	Procurement teams
"how long does custom rolling paper take"	FAQ	Any buyer with a deadline
"rolling paper certifications explained"	Expert post	Quality-conscious buyers

Expected Timeline and Outcomes

Action	Expected result	Timeframe
Publish v4 theme (within fix)	Product page equity consolidation, pos 59 → improving	4–8 weeks post-recrawl
Fix 256 × 404s	Crawl budget freed, fewer "not indexed" signals	2–4 weeks
Create Author metaobjects	E-E-A-T signals activated on all 684 posts; AI Overview eligibility restored	4–8 weeks
Rebuild /collections/custom-rolling-papers	Position 18.5 → page 1 for "custom rolling papers"	6–12 weeks
Remove/redirect 200+ low-quality posts	1,782 "crawled not indexed" drops sharply; domain quality rises	1–2 core update cycles (3–6 months)
Add commercial CTA blocks to kept posts	Existing 42k clicks/qtr start converting	2–6 weeks
Stop new consumer content	No further topical dilution	Immediate

The Honest Summary

The site is in a content quality death spiral driven by 3 months of continuous de-indexation. Google has visited 1,782 pages and refused to index them. It is crawling less of the site each week (total known pages fell by 728 in 3 months). Impressions fell 54% while indexed pages fell 16%.

The single fastest lever is the author metaobjects — it changes Google's signal on all 684 existing posts at once, costs no new content, and directly restores AI Overview eligibility (which collapsed from 15 to 0).

The single highest-ROI content action is CTA blocks — you already have 42,000 clicks per quarter going to zero-revenue pages. Adding a CTA converts existing traffic before rankings improve.

The single most important structural action is removing 200–300 posts — this is painful but necessary. Every week those pages stay live, Google's quality verdict on the domain gets slightly worse.

The | within: collection fix (v4) and the author system are already built. Upload the theme, create the author entries, fix the 404s. Everything else follows from there.

Report generated: 2026-05-25. Based on GSC Coverage export (Feb 24–May 18, 2026), GSC Performance 6-month export, Ahrefs daily overview, Shopify theme v4 export.
